Denise,

At this time there is not a more comprehensive report. I was asked by Jeff to hold off producing a report.

Most samples for Soil Gas were taken at approximately 3' to 3.5' below ground surface. One, DEC-08 was taken at 7' below ground surface.

The daycare sample I believe you are referring to was EQP-I01. This sample was a sub-slab vapor sample collected from under the daycare. The daycare is located on the north side of Ecstasy Q-Prints. EQP-03 and EQP-04 are from the playground north of the building.

The only Vapor sample collected from indoor air was EQP-IA. This sample was collected in the morning inside the Ecstasy Q-Prints shop. It should be noted that the vapor smell noticed the previous day in the late afternoon was greatly reduced on the morning the indoor air sample was collected.

DCE in these figures refers to cis-1,2-dichloroethene.

If you have any more questions, please feel free to contact me.

Jon,

I'm forwarding questions from our risk assessor. Could you please answer her questions?

thanks

Denise

Denise -- is there a more complete sampling report for the soil gas data? Specifically, I'm looking for the soil gas sample depths, and I want to confirm that the DCE is 1,1-DCE. Also, the previous email mentions VI sampling indoors and outdoors, and that there were elevated levels at a daycare? Is that one of the buildings in this report, or is there more data?

Thanks Denise. I'm at a meeting in DC this week, but will try to take a look. Please let me know if a meeting is scheduled and if you need me. If so, early next week would be better.

Jeff and George,

Here is attached some preliminary figures with the data table for you to review and discuss. I think we got some really good data.

Print this package in 11x17 to be able to read it.

Thanks,

Jon

If you have any questions, you can try my cell phone next week, but I'm not promising that I'll be able to get it.
